DIRECT DRIVE SYSTEMS MOVING TO NORTHPOINT COMMERCE CENTER IN FULLERTON, CALIFORNIA

Cerritos, Calif. – August 4, 2009 – Direct Drive Systems (DDS), the world’s leading producer of high-speed, high-power synchronous [motors and generators](#) and [magnetic bearings](#), will move its office and production facilities from Cerritos, California to an expanded location at 621 Burning Tree Road, Fullerton, California during the month of September.

The new facility features over 50,000 square feet and allows DDS to expand its testing and production capabilities to meet increasing customer demand.

“This move will provide the appropriate space to accommodate our future growth plans,” said Kevin McGlensey, president and chief executive officer of DDS. “It will also enable us to provide an excellent work environment for our staff.”

DDS has been headquartered in Southern California since it was founded in 2004.

About Direct Drive Systems

Direct Drive Systems (DDS) is the world’s leading producer of high-speed, high-power synchronous motors and generators, utilizing [permanent magnet technology](#). DDS also produces magnetic bearings, which make oil-free turbomachinery applications possible. DDS drive systems provide efficient and cost-effective compression, pumping, and generation solutions for pipeline, offshore platform, and subsea applications in the oil and gas and process industries. DDS motors and generators operate up to 23,000RPM with power levels up to 16,000HP and couple directly to loads without gearboxes, increasing efficiency while reducing size, weight, and capital/operating costs. DDS is currently headquartered in Cerritos, Calif. For more information, visit www.DirectDriveSystems.net.
