

SuperFrac™ QuickSwap™ System

The fastest and safest way to swap pumps

TechnipFMC's patent pending QuickSwap™ System is the next generation of the iComplete™ SuperFrac™, purpose-built for pump swaps with flexibles. This is a pre-rig-in system that eliminates the need for all lifting devices. Our pressure pumper agnostic design allows for quick, user-friendly disconnection and reconnection of any supplier horsepower while eliminating flow iron and hammer unions.

Ready to rig up on location, our QuickSwap™ System is easily configured to fit any frac pad design. It

prevents external damage and overstressed conditions of your flexibles. As an added feature, the support structure acts as an external protector during shipping and service. The SuperFrac™ QuickSwap™ System helps reduce maintenance and transition time, thus lowering total cost of ownership and improving pad economics.

System specifications: API 17J and 17K, 2" or 3"-15k psi flexible; Up to 21 BPM; C-hub clamp connections; TSi+ C-hub swivel option; traditional and simultaneous frac operations.

Modular

- ▶ Configurable to fit your frac pad design and horsepower placement
- ▶ Next generation of SuperFrac™ specifically designed to connect flexibles to pumps

Increased Speed

- ▶ Only one connection per pump and no iron movement
- ▶ Enables continuous frac and automation

No lifting devices

- ▶ Pre-rig-in design
- ▶ No lifting devices needed for pump transitions

Safe

- ▶ Eliminates lifting and handling tools
- ▶ Eliminates winged unions and flow iron
